Abstract

Since September 2003, the reception and analyses using level 1 image processing system MEOS (Multi Mission Earth Observation Station) for Terra, Aqua/MODIS data have been carried out in Awara Space Radio Observatory (ASRO) of Fukui University of Technology. In addition to the basic image processing system MEOS, MEOS POLAR Meteorological Processing System which can produce MODIS level 2 products, was newly introduced into ASRO in September 2005. In this report, we show the receiving and data processing system for Terra, Aqua/MODIS data installed at ASRO.
